ABOUT

I am a dedicated and self-taught professional with a strong foundation in UI/UX design, MERN stack development, generative AI, and ethical hacking. My journey in technology began with a focus on UI/UX design, where I completed the Google Job Ready UI/UX Design course. This training equipped me with a user-centered approach to creating digital experiences that are both visually compelling and accessible.

As a full-stack developer, I have developed proficiency in the MERN stack, utilizing MongoDB, Express, React, and Node.js to build scalable and efficient web applications. I am always looking to expand my technical expertise and integrate new tools to elevate user experiences.

Additionally, my interest in cutting-edge technology led me to complete the Microsoft Job Ready Generative AI course, where I gained insights into the potential and applications of AI in various fields. My knowledge of cybersecurity, furthered through the Remarkskill Job Ready Ethical Hacking workshop, rounds aout my skill set, ensuring I prioritize security and best practices in all projects.

I am passionate about continuous learning, consistently working to improve my skills and take on new challenges in the ever-evolving tech landscape.
